The Fast Hovercraft

A problem that I have everyday at school is getting my lunch box and water bottle out of my locker fast enough. My design is the Fast Hovercraft. It can help me get my lunch box and my water bottle out of my locker faster so I do not have to be at the back of the line.

My object looks like a robot spider. The color is aqua and it has four legs, two on each side. It has
bendable legs and they do not have claws. It has an on and off switch on the Fast Hovercraft. The remote is black and it has a left, a right, a back and a forward button. The Fast Hovercraft is eight inches and the remote is two inches.

You turn the Fast Hovercraft on and off with the remote. There is a switch to turn on and off. You push the left, right, back, or forward buttons to make it go to your locker to get your lunch box and water.

bottle out of your locker faster. The propeller goes fast so that is flies faster. It has a button on the remote to make the legs grab your lunch box and water bottle out of your locker. Then it will go to your desk and drop it on lightly. Then you make it go back to its spot.
